Status: 12/2023

Label printers for industrial operation

# Key features

**SQUIX** label printers for industrial operation

They find use in various areas of use.

They have been developed with consistent focus on intuitive usability and highly reliable processing.

Print mechanics and chassis are made of high-quality materials and match perfectly in design and function.

A wide range of peripherals and software enable user-specific solutions.

The rugged printers stand up to any demand, whether operated stand-alone, with a PC or in a network.

Print jobs are performed quickly and labels are provided straight away thanks to a high-speed processor.

- Reliable and quick printing
- Accurate print images
- Easy to operate
- Compact design
- Maximum quality standards

# Sample applications

PCB Type plates Cardboard and pallets

# Label printers guiding materials aligned to the left

Optimum printing in matters of different widths and materials

#### Slim ones

for printing small labels

Label printer	squ	IIX 2	
Print resolution	dpi	300	600
Print speed	mm/s max.	250	150
Print width	mm max.	56.9	54.1

#### **Universal ones**

Best-selling industrial units, providing a wide range of accessories

Label printers	SQUI	X 4.3	SQUIX 4			
Print resolution	dpi	203	300	300	600	
Print speed	mm/s max.	300	300	300	150	
Print width	mm max.	104	108.4	105.7	105.7	

A cutter can be provided integral to a basic unit.

#### Wide ones

for printing Odette, UCC and GS1 labels in logistics operations

Label printer	squi	X 6.3	
Print resolution	dpi	203	300
Print speed	mm/s max.	250	250
Print width	mm max.	168	162.6

#### Extra wide ones

for printing pallet and drum labels

Label printer	SQUIX 8.3	
Print resolution	dpi	300
Print speed	mm/s max.	150
Print width	mm max.	216

# Basic units provide a tear-off plate

Printed labels or continuous materials, wound on a roll or fanfold, can be torn off on a jagged plate. Cutting a material is another option, so is external rewinding.

# Peel-off units provide an internal rewinder

Dispense adds to the features of a basic unit. Printed labels are peeled off their liner and can be removed by hand or by an applicator.

# Label printers guiding materials aligned to the left

#### 1 Hinged cover

Material stock can be checked and printer processes be followed through a large panoramic window.

#### 2 Plungers

One is fixed next to the chassis inside. The other can be aligned to the outside margin of a label for optimum print images.

#### **3** Metal chassis

It is the base to assemble components. Made of cast aluminum

#### Print roller coating

Synthetic rubber is standard, enabling highly accurate print images. Silicone is an option if aiming for extra long life cycles.

#### **5** Label dispense

Labels are separated on a peel-off plate from their liner. A powered guide roller and a pinch roller enable highly accurate processes when printing and applying labels.

#### **6** Peripheral port

Additional modules can be plugged easily and quickly to a unit and fixed with a screw.

#### Ribbon retainer

Replacing a ribbon is no big deal thanks to three-part clamping axles.

#### 8 Roll retainer

The spring-mounted margin stop provides a screw cap and enables constant tension while materials are fed.

#### Internal rewinder

Labels or liners with or without a cardboard core can be wound on peel-off units. Handling a material is simplified by a three-part clamping axle.

#### 10 Rockei

Spring mounting and guide rollers made of Teflon reduce traction and improve the accuracy of print images.

#### 11 Material guide

It is assembled to the rocker. By turning the rotary knob, the stop can be aligned to the margin of a label.

#### Print image accuracy

The smaller a label, the higher are the demands. Print offset can be reduced by  $\pm 0.2$  mm using slip correction.

# Label printers guiding materials in centered position

# 1.11, 1.12

Basic unit

Peel-off unit

#### The precise and flexible ones

All materials that are wound on rolls or reels can be printed, so can fanfold ones. Very small labels or slim continuous materials such as pressed tubes are typical applications.

A specified sensor allows round or oval hoses as high as 5 mm be labeled.

Label printer	SQUIX SQUIX	X 4 M ( 4 MP			
Print resolution	dpi	203	300	300	600
Print speed	mm/s max.	300	300	300	150
Print width	mm max.	104	108.4	105.7	105.7

# Differences to label printers guiding materials aligned to the left

#### 1 Ribbon retainer

A ruler helps ribbons be set.

#### 2 Plungers

Both have been assembled firmly for all widths of material. There is no need of aligning the print head.

#### **3** Roll retainer

By applying the margin stop, rolls are automatically centered.

#### 4 Material guide

Its position next to the print roller supports print images be accurate. Widths are set with the help of a spindle.

#### 5 Slim print rollers

If small materials and ribbons are in use, adapted print rollers are required to achieve accurate print results. They prevent rollers from wear, print heads from contamination and avoid errors while materials are fed.

Synthetic rubber coating

SQUIX 4 MP peel-off printer providing an internal rewinder

# UHF RFID label printers guiding materials in centered position

#### Label printers providing an integral UHF RFID module

An antenna is assembled to the print head. RFID tags are written and read immediately before the labels are printed. In the event of errors, labels are indicated as invalid.

Optimized antennas add to the different RFID tags:

- 1) Standard for regular RFID tags
- 2) On metal for RFID tags applied to metal surfaces
- High sensitivity for small RFID tags demanding high signal requirements

The RFID modules already qualify for various RFID tags. Further will be added as required. cab as well supports user-specific applications.

A wide range of peripherals and software enable with a SQUIX printer optimum solutions.

Label printer	squix	( 4.3 M 4.3 MP RFID	SQUIX	SQUIX 4 M SQUIX 4 MP UHF RFID		
Print resolution	dpi	203	300	300	600	
Print speed	mm/s max.	300	300	300	150	
Print width	mm max.	104	108.4	105.7	105.7	

#### Tag calibration

A special calibration feature identifies for many regular RFID tags optimum read/write positions and performances.

Characteristic calibration graphs can be printed in accordance with a label profile.

#### Tag contents read on-the-fly

Contents such as TID, EPC and user memory can be read **on the fly** on a RFID printer and displayed by the GUI.

#### Further features are

statistics,

numbers of permitted read/write errors, void labels (i.e. labels indicated as invalid).

See further information on www.cab.de/en/squix-rfid

SQUIX 4 M UHF RFID label printer

# Label printers guiding materials in centered position and providing a separator

1 Antistatic brush

2 Separator

#### For textile operations

If operations require high heating, a ribbon may stick with the textile tape after printing. A draw roller separates the ribbon reliably from a material.

Labels and continuous materials wound on rolls or reels may be as well printed. Plungers do not have to be aligned for setting the width of a label. Adapted print rollers are provided for slim materials.

Label printers		SQUIX 4.3 MT	SQUIX	( 4 MT
Print resolution	dpi	300	300	600
Print speed	mm/s max.	300	300	150
Print width	mm max.	108.4	105.7	105.7

SQUIX 4 MT label printer providing a separator built in

# Differences to other label printers guiding materials in centered position It dissipates electrostatic charge after printing, cab in particular if synthetic materials are in use. If operations require high heating, a ribbon may stick with the textile tape after printing. A draw roller separates the ribbon reliably from a material.

# Control panel

Self-explanatory symbols simplify settings and enable printers be operated intuitive and easily.

- 1 LED: Power ON
- 2 Status bar: receive data, record data stream, prior warning to a ribbon ending, SD memory card / USB stick plugged, Bluetooth, WLAN, Ethernet, USB slave, time
- 3 Printer status: ready, pause, number of labels printed in a print job, label peeled off, awaiting external start signal
- 4 USB port for plugging a service key or a memory stick, to transfer data to the IFFS memory
- **5** Operation

Cutter / perforation cutter: cutting

External rewinder: outside or inside winding

Tear-off mode / peel-off mode: printing a label

Applicator: printing and applying a label in individual steps

Jump to menu

Reprint last label

Stop and delete all print jobs

Label feed

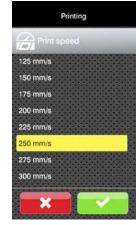

Interrupt and continue print job

Video tutorials

# External control panel

If the control panel of a printer cannot be accessed, an additional external one can be plugged.

Same functionality as on a printer

Landscape mode or portrait mode

Operability as targeted, either on an external panel or on a printer

USB 2.0 Hi-Speed device for plugging a printer

- 1 LED: Power ON
- 2 USB port for plugging a service key or a memory stick, to transfer data to the IFFS memory
- 3 cab provides specified **USB cables** for power supply. Lengths are 1.8 m to 16 m

#### Print heads

# A print head can be replaced by any other one, provided they are of equal width. They are detected by the CPU and calibrated.

Major data such as operational performances, maximum operational temperatures and heating are kept in memory by the print head. The data can be read at the premise.

#### Print heads provided for SQUIX 2, SQUIX 4 - 300, 600 dpi

sharp-edged print images small fonts, graphics on typeplates printing on materials that imply high energy needs

#### Print heads provided for SQUIX 4.3, SQUIX 6.3 - 203, 300 dpi Print heads provided for SQUIX 8.3 - 300 dpi

durable, printing in harsh environments, direct thermal printing

#### Print rollers

#### Types of material:

#### DR print rollers

Synthetic rubber coating highly accurate print images standard

#### **DRS** print rollers

Silicone coating extra long life cycles, accepting higher tolerances in print image accuracy

# **Interfaces**

- 1 Port for plugging a SD memory card
- 2 USB hosts for plugging a service key, an USB stick, a keyboard, barcode scanner, an USB Bluetooth adapter, USB WLAN stick, external control panel
- 3 USB 2.0 Hi-Speed device for plugging a PC
- 4 Ethernet 10/100 Mbit/s
- 5 RS232-C 1,200 to 230,400 baud / 8 bit

Option

**o** Digital I/O interface

Printing is triggered via a PLC, a sensor or a hand switch. Status reports and errors are displayed.

Compliant to IEC/EN 61131-2, type 1+3 The inputs and outputs are galvanically isolated and protect from reverse polarity. The outputs are also short-circuit-proof.

Free and Open Source software in cab products: www.cab.de/opensource

# OPC UA

All the latest cab printers have been designed ready for interacting with machines and components of different manufacturers in industrial plants. An OPC UA server is part of the firmware.

See further information on www.cab.de/en/opcua

#### cablabel S3 software

#### Design, print, administrate

cablabel S3 opens up the full potential of cab devices. Defining a label is first. Modular design adapts cablabel S3 to requirements step by step. Plug-ins are embedded. Native JScript programming, for example, is supported by the JScript Viewer. The designer user interface and JScript codes synchronize in real time. Optional features can be integrated, such as the Database Connector or barcode verifiers.

# Stand-alone operation

This operating mode enables a printer select and print labels while not connected to a host system. Labels can be designed using software such as cablabel S3 or a text editor on a PC. Label formats, texts, graphics and data of a database can be stored on a memory card, a USB stick or a printer's IFFS memory. Only variable data are sent by a keyboard, a barcode scanner, a scale or any other host system to a printer, or be recalled by the Database Connector from a host and printed.

#### Printer control

#### **Drivers**

cab provides drivers to control a printer with software other than cablabel S3.

Free download on www.cab.de/en/support

#### **Programming**

#### **JScript**

cab printers embed JScript language.

Download free manual on www.cab.de/en/programming

ABC abc Basic Compiler

Integral to the firmware, abc in addition to JScript enables advanced programming before data are edited for printout. For example, external printer languages can be replaced without intervening in a print job in progress. Data may be imported as well from other systems such as scales, barcode scanners or PLC.

#### **Integration**

cab as a member of this program developed a replace method for controlling cab printers from SAP<sup>1)</sup> R/3 using SAPScript. Only variable data are sent by a host system to a printer. They add on the printer to local images and fonts (IFFS, memory card, etc.).

### Printer administration

# Configuration in the Intranet and Internet

Integral HTTP / FTP servers enable a printer be controlled or configured, firmware be updated and memory cards be administrated using standard applications such as a web browser or a FTP client. Administrators and operators on behalf of SNMP / SMTP are notified of states, alerts and errors by email or SNMP diagrams. Time and date are synchronized by a time server.

#### **Database Connector**

Printers in a network may access data from a ODBC / OLEDB database and print it on labels. Data can be rewritten to a database while print jobs are in progress.

<sup>&</sup>lt;sup>1)</sup> SAP and associated logos are trademarks or registered trademarks of SAP SE.

# Accessories

2.6	<b>DR4-M30 print roller</b> Liner and continuous materials as wide as 30 mm	2.18	<b>PS800 present sensor</b> for use with materials guided aligned to the left
	DR4-M60 print roller Liner and continuous materials as wide as 60 mm DR4-M80 print roller		Labels are detected in peel-off position. As soon as a label has been removed, the next one is automatically printed.
	Liner and continuous materials as wide as 80 mm		The minimum width of a label in use is 16 mm, its minimum height 6 mm.
	Synthetic rubber coating enables highly accurate print images.		Distant 7 mm to the locating edge
2.7	<b>DRS4 print roller</b> Materials as wide as 120 mm	2.19	<b>PS900 present sensor</b> for use with materials guided aligned to the left or in centered position
	Silicone coating enables extra long life cycles, accepting higher tolerances in print image accuracy.		The moveable sensor qualifies for small or customized labels. As soon as a label has been removed, the next one is automatically printed.
2.8	External control panel If the control panel of a printer cannot be accessed, an additional external one can be plugged.		The minimum width of a label in use is 4 mm, its minimum height 6 mm.  If materials are in use aligned to the left, they must be 12 cm to 60 mm distant to the locating edge. Materials in centered position: ibid
10 lb	Same functionality as on a printer  Landscape mode or portrait mode	2.20	edge. Materials in centered position, ibid
	Operability as targeted, either on		<b>PS1000 MP present sensor</b> for use with materials guided in centered position
	an external panel or on a printer  USB 2.0 Hi-Speed device for plugging a printer		Labels are detected in peel-off position. As soon as a label has been removed, the next one is automatically printed.
	cab provides specified <b>USB cables</b> for power supply. Lengths are 1.8 m to 16 m.		The minimum width of a label in use is 4 mm, its minimum height 6 mm. Centered position
2.9	Label sensor 4.5 Only for operation on a SQUIX 4/4.3 M printer guiding materials in centered position. Maximum material passage 5 mm	2.21	Extended DP210, DP410, DP610 peel-off plates for use with labels that hardly separate due to strong adhesive or thick liner material. Use only if printing has been triggered by the
2.10	Downscale print head pressing system		touch of a button on the display or by a control signal. A present sensor cannot be used.
	Direct thermal printing requires less pressure exterted to a print head, resulting in a longer life cycle of the latter.	2.22	Reflective product sensor Detecting products automatically on a conveyor
2.11	Antistatic brush It dissipates electrostatic charge after printing, in particular if synthetic materials are in use.	3.1	Digital I/O interface Labeling is triggered via a PLC, a sensor or a hand switch. Status reports and errors are displayed.
2.12	Adapter 100 if operating label rolls with a core diameter of 100 mm and outside diameter succeeds 180 mm	3.2	I/O interface plug, SUB-D, 25 pins All control signals connect to the I/O interface using clamping screws.
2.13	SD memory card	3.3	Label selection - I/O box A maximum of 16 labels per box can be selected from a memory card
2.14	USB stick		by a superior control unit, such as a PLC. Two boxes may be plugged. Making use of an I/O box, four inputs and four outputs suffice for implementing
2.15	<b>USB WLAN stick</b> 2.4 GHz 802.11b/g/n	3.4	PLC processes via abc programming.
	Hotspot mode or infrastructure mode		TR2 hand switch For plugging to a digital I/O interface
2.16	USB WLAN stick with a rod antenna to extend the range of operation 2.4 GHz 802.11b/g/n + 5 GHz 802.11a/n/ac	3.5	Foot switch For plugging to a digital I/O interface
	Hotspot mode or infrastructure mode	4.1	
2.17	USB Bluetooth adapter		<b>RS232-C cable</b> 9/9 pins, 3 m

# Cutting, perforating

**CSQ 401 / CSQ 402 cutters** are provided assembled to a printer ex factory or accessorial on delivery for all SQUIX 4 units.

Paper labels and self-adhesive labels, cardboard and synthetic materials can be cut, so can shrink tubes. By pivoting the cutter, materials can be accessed for removal.

The CSQ 402 provides a more powerful engine and titanium-coating, enabling highly performant cutting even with thick materials such as cardboard and shrink tubes, as well as with self-adhesive materials. The number of cuts performed are kept in memory, allowing wear control.

**PSQ 403 perforation cutters** are provided for all SQUIX 4M units Continuous materials such as shrink tubes can be perforated, to simplify separation by hand at a later stage.

The design and technical data correspond to the CSQ 402.

Cutter			CSQ 401	CSQ 402		
Perforation cutter				PSQ 403		
Operated with		SQUIX 4.3 SQUIX 4.3 M	s, SQUIX 4 I, SQUIX 4 M	SQUIX 4.3 M, SQUIX 4 M

<sup>\*</sup> at use of material 1 mm high, no backfeed

The CU400 will be replaced by the CSQ cutter series, the PCU400 by the PSQ403 perforation cutter.

# Stacking

#### ST400 M stacker providing a cutter

- 1 Printed materials can be cut and then collected. Print jobs stop if the maximum number of labels have been collected. Limitations may occur with stiff or curved materials. cab recommends to have such operations tested.
- 2 A unit can be set anywhere on a table with the help of a base frame.

Stacker providing a cutter		cutter	ST400 M
Operated with			SQUIX 4.3 M, SQUIX 4 M SQUIX 4.3 MT, SQUIX 4 MT
Material	Width	mm	20 - 100
	Weight (cardboa	rd) gr/m²	60 - 300
	Thickness	mm	0.05 - 0.8
Cutting le	ength	mm	20 - 150

Performa	nce*	cuts/min	100
Printing s	stops if		no final cutter position, paper jam, cover open, limit of collecting
Limit of c	ollecting	mm max.	100

<sup>\*</sup> at use of material 1 mm high, no backfeed

#### Support table - label W x H

The table and the protective cover are adapted to the size of a label. Please request individually.

# Verifying

**CC200-SQ scanner** for detecting linear 1D barcodes, 2D and stacked codes A camera checks a code printed on a label in horizontal or vertical direction in terms of legibility or content. In the case of a bad coding, printing stops and the label can be removed by hand. Retracting such labels after stopping and blackening them is another printer option.

The scanner can be operated in tear-off mode and in peel-off mode.

Scanner		CC200-SQ		
Operated with		all SQUIX units		
Scan distance	mm	45 - 150		
Scan angle	0	-15 to +15		
Number of codes on a label		1		
Controls	GOODBAD	check of legibility		
	VERIFY	check of legibility and results compared with initial data		

See www.cab.de/en/cc200 for more information.

# Rewinding, unwinding with or without the use of a cardboard core

**RG guide plates** enable labels be rewound internally on peel-off units. A guide plate therefore replaces the peel-off plate.

Guide plate		RG200	RG400			
	Operated with		SQUIX 2 P	SQUIX 4.3 P SQUIX 4 P	SQUIX 4.3 MP SQUIX 4 MP

Winding		outside or inside			
Adapter kit					

# Tube labeling

#### **AXON 2 tube applicator**

Tubes and vials of diameters 10 mm to 22 mm can be labeled (7 mm to 16 mm if options are provided). See AXON catalogue
The tubes and vials can be inserted and removed by hand or automated by a handling system. They may be ejected also to a tray.

Tube	applicator		AXON 2
Operate	ed with		SQUIX 4.3 MP, SQUIX 4 MP
Tube	Tube Diameter mm		10 - 22
Length, closure cap included mm		cap included mm	25 - 120
	Conicity	% max.	0.8

	Width	mm	5 - 56
	Height	mm at least	12
Liner	Width	mm max.	60
Control	S		applicator pivoted, tube missing, incorrect tube diameter

# Cable labeling

See for more information on WICON and labels.

www.cab.de/en/wicon

#### WICON wrap-around applicator

Cylindric items of diameters of 2 mm to 16 mm, such as single wires, strands, cables, hoses, tubes or round rods, can be labeled with the wrap-around applicator.

Transparent laminate covers data blocks and protects them persistently from dust and wear.

Items are inserted in horizontal orientation and centered by panels. Printing a label and wrapping it around an item takes 1.8 to six seconds, depending on the number of wrap-arounds.

Operation starts as soon as an item has been inserted. It may be triggered also via a data interface or an I/O interface. A label is printed and then picked up by the applicator. The diameter of an item is identified on the wrapper head. The size of a label determines how many times it will be wrapped around the item.

Wrap-	around applicator		WICON
Operate	d with		SQUIX 4.3 MP, SQUIX 4 MP
Item	Diameter	mm	2.0 - 16.0
	Length	mm at least	132
	Centering panel distant to left and right	mm	124
	Label margin distant to centering panel	mm	12.7
	Label margin distant to edge of item by sto	p mm	25 - 100
	Deflection related to a length of 124 mm	mm max.	1
Label	Width	mm	12.7 - 50.8
	Height	mm	19.1 - 70.0
Applicat	or Cycle time printing and applying or applying and printing	S	1.8 - 6
	Number of wrap-arounds		2 - 10
	Speed of wrapping	u/sec	3.0
	Initial roll-on to speed of wrapping	%	10 to 100
	Wrapper position	mm	-2

# S1000 applicator

#### Apply labels in real time

S1000 attached to a SQUIX peel-off printer is economic, whether operated semi-automated or integrated in vertical orientation to a manufacture plant.

Labels are applied to an item by a stroke cylinder.

#### Long life cycles

The ball bearing guide bars are low wear.

#### 2 Different levels of application

By providing different lengths of stroke for the cylinder, labels can be applied on various heights to an item.

#### 3 Compressed air regulation

Micro filters prevent from contamination. Decompression keeps the quality of label applications consistently high.

#### Reliable processes

Supporting air, intake air and stroke speeds can all be set. The pressing force can be reduced to less than 10N (1kg) in sensitive operations. Purging the intake ducts subsequent to every label application prevents from contamination.

#### 6 A wide range of sizes

Labels 25 mm to 176 mm wide and 25 mm to 200 mm high can be applied.

#### Supporting air

It enables labels be blown onto a pad.

#### Pad

Labels are transferred to a pad and held there by vacuum. A stroke cylinder moves the pad with the labels to an item.

#### **Pre-dispense**

Label applications can be verified by the touch of a button. Printing is triggered on a first touch and the printed label is transferred to the applicator. The label is applied on a second touch.

Applicator	S1000-220	S1000-300	S1000-400

Label width	mm	10 - 63	10 - 116	
Label height	mm	10 -	80	
Surface of an item		flat		
State of an item at the moment a label is appl	iod	at rest or in motion		

# Demand modules

#### S5104, S5104 M, S5106 demand modules

Items can be labeled in motion on a conveyor.

A product sensor detects the target position of a label.

While a label is peeled off, the next one is printed.

The speed of transport has to match with the speed of printing.

A reflective sensor monitors positioning.

A label sensor can be included or not.

Demand module	S5104	S5104 M	S5106
Operated with	SQUIX 4.3 SQUIX 4	SQUIX 4.3 M SQUIX 4 M	SQUIX 6.3
Label width mm	25 - 116	4 - 110	50 - 176
Label height mm	25 - 210	10 - 210	25 - 210
Distance of initial print line mm to the peel-off plate	336 - 518		
Surface of an item		flat	
Height of an item		fixed	
State of an item at the moment a label is applied	in motion d (speed adapted to printing)		nting)
Weight packaging excluded kg	2.5	2.5	3.5
Consumption of power W max.	not specified		
Performance labels/min approx.1)	1) 60		

 $^{\mbox{\tiny 1)}}$  calculated using labels 100 mm high and a print speed of 100 mm/s

# All-around labeler

#### All-around labeler

Cylindric items can be labeled on a 360° circumference. They are placed onto rollers. Label applications are triggered by a hand switch or a foot switch.

A mount and a cable for plugging a SQUIX printer are included on delivery, so is a foot switch.

Tamp-on pad		A1021	M1021
Operated with		SQUIX 2	SQUIX 4.3, SQUIX 4
Label width	mm	25 - 63	25 - 116
Label height	mm	25 - 140	
Diameter of an item	mm	12 - 40	
Surface of an item		cylindric	
State of an item at the moment a label is	applied	in rotary motion	

# **Assistants** for assembling SQUIX label printers

#### Mount

A label printer system and a jig for retaining an item can be assembled.

#### Assembly plate

to assemble a label printer system

#### ─**②** Profile, aluminum square

40 mm, 80 mm, 120 mm Further lengths may be provided upon request.

#### **3** Base plate

to assemble a jig for retaining an item Standard size 500 mm x 255 mm

#### Floor stand

It enables a printer system be ready quickly and flexibly in any manufacture plant. Target positions (i.e. heights, widths) to apply a label can be set in few steps. Four guide rollers provide mobility. At the place of operation, the floor stand can be aligned with the help of feet to adjust.

Floor stand		1600
Total height	mm	1600
Height to apply a label	mm max.	1400
Offset to the centre of a label	mm	230 - 500
Carriage	$W \times H \times D mm$	600 x 140 x 860

# **Jig to retain a printer unit**A printer can be fixed to the assembly plate and quick-locked.

# Label printers to feature a special cover or a protective chassis

#### **Conductive ESD surface**

provided for SQUIX 2, SQUIX 4, SQUIX 6

Manufactured according to DIN EN 61340-5-1:2016 to protect from electrostatic charge

The hinged cover, top plate included, is also a spare part.

#### Food application design

provided for SQUIX 4, SQUIX 6

By means of a magnetic cover, splints can be detected by metal detectors or x-ray inspection systems.

Blue color optically differentiates from food.

The entire casing can be manufactured detectable upon request.

Materials comply with food directives such as EU Nr. 10/2011 and FDA CFR 21 177.2600

#### Stainless steel chassis for food applications

provided for SQUIX 4, SQUIX 6

Labels are removed through an aperture on the front.

The front cover must be opened and the printer pulled out on telescopic rails for material replacement. Steam jet cleaning only if the entire unit is closed.

Protection class IP69K according to EN 60529

#### Chassis protecting from dust

provided for SQUIX 4, SQUIX 6

Labels are removed through an aperture on the front.

A filtered fan provides excess pressure and prevents from dust entering the chassis.

Protection class IP52 according to EN 60529

**Chassis for cleanroom operation** feature a suction nozzle provided for SQUIX 4, SQUIX 6
